

(#channel-partner-instructions) Channel Partner Instructions: Compare Page

Important Note:

After February 14, 2025, please fully remove any previous HTML content to ensure that pages prior to this date are not merged with the new content.

(#version-1) Version 1.1

(#module-features) Module Features

- Responsive design with support for large, medium and small viewports.
- Standard and high resolution images.
- Locally hosted images.

(#product-removal) Product removal

In order to remove any particular product that may not be available in your region, please follow these steps:

1. Open the expanded (unzipped) folder.
2. In your html editor, open the module source code file named `index.html`.
3. In order to fully remove a product from the Compare section, you will need to update two separate sections within the `index.html`:

▪ # (#product-removal-dropdowns) Product dropdowns

There are multiple dropdowns, one for each column, that will need to be updated in order to properly remove a product.

- a. Please find the `<form>` element(s) with the class name of `selector-element`. These include references to all available products on the page.
- b. Within each `<form>` element, you will need to find and remove the `<option>` that wraps the product you'd like to remove.

e.g. `<option value="1">Apple Watch Series 1</option>`

▪ # (#product-removal-compare) Compare table

There are several rows within the Compare table. Each row should have a reference to a specific product and it's features. You'll need to remove each reference to properly remove the product from the Compare table.

- a. To begin, you will need to find each individual row in the Compare table code. These are contained in a parent `<div>` tag, with a class of `compare-section`, that should have two comments wrapping each.

Note: The comment tags should look something like this:

- **Example start:** `<!--BEGIN > CATEGORY > IMAGES-->`
- **Example end:** `<!--END > CATEGORY > IMAGES-->`

Within each `compare-section` you will find another `<div>` tag, with a class of `compare-row`. This is where our product information for each category is found.

- b. Within each `compare-row` you'll find multiple `<div>` tags, with classes `compare-column` and `product-#`. You will need to determine which of these `compare-column`'s contains the product you'd like to remove.

Note: Once you find the `compare-column` with the product you'd like to remove, note the `product-#`. This will help you find your product in other `compare-row`'s.

- c. Remove the `compare-column` and all of its contents.
- d. Repeat this removal throughout each `compare-section` and it's `compare-row`'s.

(#convert-compare) Convert Compare

In order to convert the compare from static or to static please follow the following steps

1. Open the expanded (unzipped) folder.
2. In your HTML editor open the source code file named index.html
3. Determine which compare you would like:

- If static is required follow the following steps:

- a. Find this line

```
<div id="interactive-compare-header" role="row" class="compare-row" compare-header-show="true">
```

Change it to

```
<div id="interactive-compare-header" role="row" class="compare-row" compare-header-hide="true">
```

- b. Find this line

```
<div id="static-compare-header" role="row" class="compare-row" data-column-group="true" compare-header-hide="true">
```

Change it to

```
<div id="static-compare-header" role="row" class="compare-row" data-column-group="true" compare-header-show="true">
```

- If interactive is required follow the previous steps in reverse.
